

Serial No.: 10/014,146

Attorney Docket No.: 2001P18437US

IN THE CLAIMS:

This listing of the claims will replace all prior versions and listings of the claims in the application:

1. (Previously Presented) A computer-implemented telecommunications call center, comprising:

a call information database for storing call information;
a query engine operably coupled to said call information database; and
a graphical user interface coupled to provide one or more tables of user selectable query parameters for accessing call information from said call information database in a text form, said query parameters defining aliases of search criteria; and
wherein said query engine is adapted to translate said query parameters into a database-readable form and said graphical user interface is configured to display the database readable form.

2. (Original) A telecommunications call center in accordance with claim 1, said database-readable form comprising a Structured Query Language (SQL) form.

3. (Original) A telecommunications call center in accordance with claim 2, wherein results of a query are provided to said graphical user interface in a text-readable form.

4. (Currently Amended) A computer-implemented method, for use in a telecommunications call center, comprising:

inputting call center database text query information for accessing call information from a call information database into a graphical user interface, said query parameters defining aliases of search criteria, said inputting including selecting from one or more tables of query parameters;

translating said call center database text query information into a database-readable query and displaying the database readable query; and

Serial No.: 10/014,146**Attorney Docket No.: 2001P18437US**

returning a result of said database-readable query to said graphical user interface for display.

5. (Original) A method in accordance with claim 4, said translating comprising translating into a Structured Query Language (SQL) form.

6. (Original) A method in accordance with claim 5, said inputting further comprising:
selecting one or more fields to view from a first graphical user interface window;
and
selecting predetermined criteria to apply to said fields using a second graphical user interface window.

7. (Previously Presented) A telecommunications system comprising:
one or more telecommunications networks;
a switch configured to switch calls between devices on said one or more telecommunications networks; and
a call center adapted to monitor calls through said switch, said call center including
a call information database for storing call information;
a query engine operably coupled to said call information database; and
a graphical user interface coupled to provide one or more tables of user selectable query parameters for accessing call information from said call information database in a text form, said query parameters defining aliases of search criteria; and
wherein said query engine is adapted to translate said query parameters into a database-readable form and said graphical user interface is configured to display the database readable form.

Serial No.: 10/014,146

Attorney Docket No.: 2001P18437US

8. (Original) A telecommunications system in accordance with claim 7, said database-readable form comprising a Structured Query Language (SQL) form.

9. (Original) A telecommunications system in accordance with claim 8, wherein results of a query are provided to said graphical user interface in a text-readable form.

10. (Original) A telecommunications system in accordance with claim 9, said graphical user interface comprising

- a first screen for selecting fields for searching;
- a second screen for entering search criteria for said fields; and
- a third screen for displaying results of said searching.

11. (Previously Presented) A method, comprising:
providing one or more telecommunications networks;
providing a switch configured to switch calls between devices on said one or more telecommunications networks; and

providing a call center adapted to monitor calls through said switch, said call center including

- a call information database for storing call information;
- a query engine operably coupled to said call information database; and
- a graphical user interface coupled to provide one or more tables of user selectable query parameters for accessing call information from said call information database in a text form, said query parameters defining aliases of search criteria; and

wherein said query engine is adapted to translate said query parameters into a database-readable form and said graphical user interface is configured to display the database readable form.

12. (Original) A method in accordance with claim 11, said database-readable form comprising a Structured Query Language (SQL) form.

Serial No.: 10/014,146**Attorney Docket No.: 2001P18437US**

13. (Original) A method in accordance with claim 12, wherein results of a query are provided to said graphical user interface in a text-readable form.

14. (Original) A method in accordance with claim 13, said graphical user interface comprising

- a first screen for selecting fields for searching;
- a second screen for entering search criteria for said fields; and
- a third screen for displaying results of said searching.

15. (Previously Presented) A telecommunications method for providing an at least partially computer-implemented call center, comprising:

- providing a call information database for storing call information;
- providing a query engine operably coupled to said call information database; and
- providing a graphical user interface coupled to provide one or more tables of user selectable query parameters for accessing call information from said call information database in a text form, said query parameters defining aliases of search criteria; and

wherein said query engine is adapted to translate said query parameters into a database-readable form and said graphical user interface is configured to display the database readable form.

16. (Original) A telecommunications method in accordance with claim 15, said database-readable form comprising a Structured Query Language (SQL) form.

17. (Original) A telecommunications method in accordance with claim 16, wherein results of a query are provided to said graphical user interface in a text-readable form.
